Shovan Sahu

Backend Developer

+91 9832432155 | shovansahu000@gmail.com | Portfolio | GitHub

Summary

Backend Developer with 1.5+ years of experience building fast, scalable APIs and reliable data pipelines. Skilled in Node.js, TypeScript, and Python, with a strong focus on system reliability, event-driven architecture, AI integrations, and cloud deployments. Passionate about solving complex problems and designing backend systems.

Technical Skills

Languages:	JavaScript, TypeScript, Python
Frameworks:	Node.js, Express.js, Bun, FastAPI, Django
Databases:	MongoDB, Redis, Elasticsearch, Qdrant, PostgreSQL
Messaging & Queues:	NATS, Redis, RabbitMQ (basics), Bull.js & BullMQ
Cloud & Tools:	AWS (EC2, S3), Render, Vercel, Docker, Git, GitHub, Postman
Web Scraping & Testing:	Selenium, Puppeteer, Jest, Joi
Frontend (familiarity):	React, Redux, Tailwind CSS, Socket.io
Core Concepts:	REST APIs, Microservices, Event-Driven Design, Async Background Processing, Vector Embeddings, MCP (Model Context Protocol), AI/RAG Pipelines

Experience

Independent Project | InsightsHub *Jan 2026 – Present*

Self-directed · Node.js, TypeScript, Python (FastAPI), Qdrant, Docker, ElasticLake, React.js

- Architected a distributed RAG microservices platform in Node.js/TypeScript for a strongly-typed, maintainable backend.
- Built a decoupled vector storage service with FastAPI and Qdrant, integrating Groq API inference and optimized text chunking to boost context retrieval accuracy to 88%.
- Integrated Razorpay for subscription lifecycle management and S3-compatible object storage, with secure webhook verification.
- Containerized the full application stack with Docker Compose, enabling independent service deployability and horizontal scaling.

Oggangs Pvt. Ltd. | Backend Developer Intern *Feb 2025 – Oct 2025*

Bangalore, India (Remote)

- Built and optimized core REST APIs with Node.js and Express.js, handling secure auth and business logic for 50,000+ monthly requests.
- Designed asynchronous background job pipelines with Bull.js and Redis, offloading heavy scraping workloads and cutting core API latency by 42%.
- Used NATS pub/sub to decouple internal services and stream event data between the API layer and background workers.
- Built a Python microservice for an ETL pipeline that cleaned and processed raw text data with a 95% success rate.
- Configured Elasticsearch for full-text search and faceted filtering, achieving sub-100ms retrieval across 2M+ documents.
- Built AI-driven APIs to extract structured data from conversations using LLMs, cutting manual data entry by 60%.

Freelance Developer *Mar 2024 – Dec 2024*

Remote

- Built and shipped full-stack apps for multiple independent clients using Node.js, Express.js, React.js and MongoDB.
- Designed a real-time messaging feature with Socket.io, tuned for low-latency delivery under concurrent connection load.
- Handled end-to-end client communication, requirements gathering, and deployment for each engagement.

Education

Swami Vivekananda University *Graduated: 2025*

Bachelor of Technology in Computer Science and Engineering — Kolkata, West Bengal
