SUMMARY

Backend Developer with 1+ year of experience building scalable APIs and reliable data pipelines using Node.js, JavaScript, and Python. Strong focus on system reliability, event-driven architecture, AI integrations, and cloud deployments, with hands-on experience in Redis caching, background job processing, and RAG-based systems.

EXPERIENCE

HangoutX Media Pvt. Ltd. | Backend Developer Intern Sep 2026 – Present

Noida, India (Remote)

- Cut socket and API latency from **~2s** to **~300ms** (**~85%** faster) through Redis caching, query optimization, and streamlined request handling in Node.js.
- Implemented Redis caching with a **1-hour** TTL, cutting repeated database calls to **0** within the cache window and significantly reducing database load.
- Built asynchronous task pipelines with BullMQ and Redis to offload heavy-lifting tasks, keeping APIs and sockets responsive under load.
- Improved AI response quality by refining system prompts and context handling for more relevant answers.

Oggangs Pvt. Ltd. | Backend Developer Intern Feb 2025 – Oct 2025

Bangalore, India (Remote)

- Built and optimized core REST APIs with Node.js and Express.js, handling secure auth and business logic for **50,000+** monthly requests.
- Designed asynchronous background job pipelines with BullMQ and Redis, offloading heavy web scraping workloads and cutting core API latency by **42%**; used NATS pub/sub to decouple services and stream events to workers.
- Built voice agents using Vapi and ElevenLabs for automated conversational interactions.
- Built a prepaid mobile recharge module and integrated it into the existing backend services.
- Built a Python ETL microservice that cleaned and processed raw text data with a **95%** success rate.
- Set up Elasticsearch full-text search and faceted filtering with **sub-100ms** retrieval across **2M+** documents.
- Built LLM-powered APIs to extract structured data from conversations, cutting manual data entry by **60%**.

PROJECTS

InsightsHub Jan 2026 – May 2026

Node.js, TypeScript, Python (FastAPI), Qdrant, Docker, ElasticLake, React.js

- Architected a distributed RAG microservices platform in Node.js/TypeScript for a strongly-typed, maintainable backend.
- Built a decoupled vector storage service with FastAPI and Qdrant, integrating Groq API inference and optimized text chunking to boost context retrieval accuracy to **88%**.
- Integrated Razorpay for subscription lifecycle management and S3-compatible object storage, with secure webhook verification.
- Containerized the full application stack with Docker Compose, enabling independent service deployability and horizontal scaling.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Frameworks: Node.js, Express.js, FastAPI, Django, Django REST Framework (DRF)

Databases & ORM: MongoDB, PostgreSQL, Redis, Elasticsearch, Qdrant, Django ORM

Messaging & Queues: BullMQ, NATS, RabbitMQ

AI: LLM Integration, RAG Pipelines, Vector Embeddings, AI Assistants

Cloud & Tools: AWS (EC2, S3), Docker, Git, GitHub, Render, Vercel

Core Concepts: Microservices, Event-Driven Design, Async Background Processing

Frontend (Familiarity): React, Redux, Tailwind CSS, Socket.io

EDUCATION

Swami Vivekananda University Graduated: 2025

Bachelor of Technology in Computer Science and Engineering, Barrackpore, West Bengal **CGPA: 7.52**
